

Identity and Access Management (IAM) is an area where most organizations struggle today. A lack of effective IAM controls poses significant risks not only to compliance, but also an organization's overall security posture.

The SCE Group Identity and Access Management Envisioning Workshop helps organizations evaluate their current IAM state, review IAM objectives, identify pain points and drivers, strengthen and simplify access to critical resources by offering recommendations encompassing IAM capabilities to improve their Identity Management (IdM) and Identity Access Management strategies.

HOW IT WORKS

1. Pre-Workshop

The SCE team conducts a pre-project call to discuss the agenda, key objectives and plans to prepare for the onsite workshop assessment activities. We also provide a questionnaire for a customer to complete an IAM solution inventory to be reviewed during the workshop.

2. Two-Day Onsite Workshop

Day One: Deep discovery through stakeholder meetings and data collection, focusing on business drivers, priorities and key technical and security requirements.

Day Two: Continuation of deep discovery, review of best practice and industry trends and their impact on the customer's objectives, overview of the IAM vendor landscape, analysis of external and internal influences on access management practices. Also, review a high-level roadmap for discussion and alignment.

3. Workshop Deliverables

The SCE team reviews the results of the onsite discovery and post-workshop gap analysis and delivers a report that includes an overview of the IAM, current IAM state, and a high-level roadmap with tactical and strategic recommendations on how to strengthen organization's IAM posture.

The SCE Group is defined by a simple, yet powerful mission:
Security Assurance – protect, defend, and safeguard the critical data of our clients. Offering a holistic approach rooted in the principals of identity and access, solutions designed by The SCE Group are purpose built to help organizations of all sizes and industries strengthen cyber security posture.
